

## DataGarrison Station Quick Start Guide

Thank you for purchasing a DataGarrison Station. Here are some instructions and links to get you going.

### ***Internet Account***

Your online account is now set up at <https://DataGarrison.com>

*user ID:* \_\_\_\_\_  
*pswd:* \_\_\_\_\_ (case sensitive)

**Note:** Both the user ID and password are case sensitive. If there is no user ID or password listed above, please call the number below to open an account. Be sure to have your device IMEI number handy.

Once logged in, you'll be able to see some QA test data that was recently uploaded.

### ***Hardware Quick Start***

Follow these steps to activate your system:

- 1) Log into your account and visit your device's 'Control Panel' page and send a 'start/restart' command from the drop-down list there.
- 2) Open the enclosure and connect all sensors to the DataGarrison Station.
- 3) Connect the battery cable to the circuit board connector.
- 4) Press the reset button.

**Note:** For satellite versions, place the station outdoors and upright in an area with a good view of the sky. Place cellular stations anywhere there is adequate cellular phone coverage. If using ModBus or SDI-12 devices, refer to the [DataGarrison Station Users Guide](#) for additional instructions.

Once the above steps are followed, data from your station should be available on line within about 25 minutes.
